

A strong visual system makes the story easier to follow.

A reusable HTML-first template for AI agents that need polished slides, printable pages, and reliable handoff artifacts.

16:9 CANVAS TEMPLATE LUXURY

One clear claim gives the slide its shape.

The layout keeps the main idea visible while the supporting detail stays close enough to scan.

Signal

Lead with the point

Use a direct title that names the subject or the finding. The audience should know what to look at before they read the detail.

- Short title with a visible subject
- One visual priority per page
- Evidence close to the claim

System

Keep the rhythm stable

Repeat margins, type scale, and page markers so the deck feels intentional even when an agent creates new content.

- Consistent spacing tokens
- Accessible text hierarchy
- Local, deterministic assets

A small set of metrics can anchor a large idea.

The same component can present a scorecard, a benchmark, or a design-system health check.

handoff formats per template folder

The workflow gets stronger when validation and visual review happen before delivery.

The right template changes how the audience reads.

Style is a communication decision. Match the visual grammar to the audience, topic, and level of urgency.

Quiet narrative

Make space for reflection

Use generous margins, low contrast, and a restrained accent when the story depends on trust, nuance, or a considered decision.

- Editorial, portfolio, or strategy work
- Longer reading moments
- Subtle hierarchy

High signal

Make the change visible

Use contrast, strong alignment, and a clear focal point when the deck must help a group act quickly.

- Launch, operating review, or product work
- Short attention windows
- Decisive visual cues

From brief to handoff, the system stays inspectable.

The template gives an AI agent a stable surface for content while the renderer protects output quality.

01 Frame Choose a style and write a direct narrative outline.	02 Compose Place content into an HTML slide contract with local tokens.	03 Validate Check metadata, ids, readability, and image accessibility.	04 Deliver Render PDF and PPTX, then review the actual pages.

Good design makes precise writing easier to trust.

“

When each slide has one job, the audience spends less time decoding the layout and more time considering the idea.

PRESENTLAB DESIGN PRINCIPLE

1 job

per slide keeps the narrative legible and gives the next slide room to move.

Choose a style. Keep the story clear.

Every folder in this gallery contains the HTML source plus rendered PDF and PPTX outputs for a fast, inspectable starting point.
